GRANTS, AWARDS, HONORS, AND FELLOWSHIPS

- Dissertation selected for presentation at Inside the Graduate Center: A Dissertation Showcase 2021¹
Development Bank of Latin America Research Grant (\$2K)
Mario Capelloni Dissertation Fellowship, award (\$25K) for students of high academic merit who show exceptional promise in their field, CUNY, 2021
Provost’s University Fellowship (\$5.5K), CUNY, Spring 2021
Center for Latin American, Caribbean, and Latino Studies Research Grant (\$1.5K), CUNY, 2021
Doctoral Student Research Grant (\$1.3K), CUNY, Spring 2021
Doctoral Student Research Grant (\$1K), CUNY, Spring 2019
Claremont Graduate University Dissertation Workshop (selected to participate and funded), 2019
Summer School on Socioeconomic Inequality at the University of Bonn (selected to participate and funded), 2018
Luxembourg Income Study Introductory Workshop (selected to participate and funded), 2018
Advanced Research Collaborative Student research praxis award (\$4K), CUNY, Spring 2018
Graduate Center Fellowship (tuition and stipend), City University of New York 2016 – 2021
Merit-based fellowship (tuition and stipend), Georgetown University, 2014 – 2015
Tuition fellowship (100%), Graduate School of Business, Universidad de Chile, 2009
Scholarship based on socioeconomic background, FEN, Universidad de Chile, 2004 – 2008
Tuition fellowship (~50%) based on merit and socioeconomic background, Ministry of Education, 2004 – 2008
Scholarship based on university admission test score, Local government of Cauquenes, 2004 – 2008

RESEARCH PRESENTATIONS (INCLUDING SCHEDULED)

- 2022:** AEA/ASSA Conference (AEA’s poster session)
2021: Second World Inequality Conference, Southern Economic Association, LACEA Annual Meeting, Workshop RED 2022 at CAF, Development Bank of Latin America, Ninth ECINEQ Meeting, Canadian Economics Association Conf., Jagiellonian University, Society of Labor Economists Conf., Western Economic Association Annual Conf., Conf. on Opportunities, Mobility and Well-being, Centro de Estudios Espinosa Yglesias, Midwest Economics Association, Social Mobility and Economic Performance Workshop, and Western Economic Association International.
2020: Stone Center on Socio-economic Inequality, Southern Economic Association, Missouri Valley Economic Association, Stata Conference, Western Economic Association International, Eastern Economic Association, and New York Camp Econometrics (canceled).
Before 2020: The World Bank (co-author), Stata Conference, GWU Student Research Conf., APPAM DC Regional Student Conf., and CGU Dissertation Workshop, SSSI Bonn (poster), XLIX CLADEA Conf. (co-author), Annual Meeting of the Chilean Society of Economists, and Central Bank of Chile.

REFEREE

- Latin American Research Review, European Journal of Sports Science, Structural Change and Economic Dynamics, Journal of Income Distribution, Cuadernos de Economia, Research Grants of the National Science Fund of Chile

¹ I could not participate.

OTHER SERVICE

Member of the public registry of experts for the reference copper price used in the Chilean budget rule
Member (elected by Ph.D. students in economics) for the Graduate Center Admissions & Awards Committee, and the Executive Committee for 2018-2019 and 2019-2020

EXPERIENCE

TEACHING

Instructor, Introduction to Econometrics, City College of New York, Fall 2017-Spring 2020
Instructor, Introduction to Macroeconomics, Universidad de Santiago, Spring 2014
Graduate teaching assistant, Finance (MBA), Universidad de Chile, Fall 2011-2013
Teaching assistant, Introduction to Economics, Universidad Diego Portales, Fall and Spring 2010-2011

OTHER EMPLOYMENT

Short term consultant at the Development Research Group (Poverty and Inequality), World Bank, May 2019 – Jun 2021
Short term consultant at the Macroeconomics, Trade, and Investment Global Practice, World Bank, Jul 2018 – Jun 2019
Short term consultant at the Development Research Group (Human Development), World Bank, Mar 2016 – Jun 2016
Research associate, Stone Center on Socio-economic Inequality, Jan 2018 – May 2021
Consultant, Labor Markets Division, Inter-American Development Bank, Mar 2016 – Aug 2016
Senior economic and financial analyst, Central Bank of Chile, Jan 2012 – Aug 2014
Economic adviser to Joaquin Vial (board member), Central Bank of Chile, Jan 2012 – Aug 2014
Economic and financial analyst, Central Bank of Chile, Feb 2010 – Dec 2011

OTHER SKILLS

Software: Proficient in Matlab, R, and Stata. Intermediate knowledge in Python
Languages: Spanish (native) and English (fluent)

THESIS ABSTRACT

Paper I: *“Does it Matter Where You Grow up? Childhood Exposure Effects in Latin America and the Caribbean”*

This paper studies whether the observed differences across regions in upward intergenerational mobility in education in Latin America and the Caribbean (LAC) can be attributed to the sorting of families or the effect of growing up in these different regions. I exploit differences in the age of children at the time their families move across regions to isolate regional childhood exposure effects from sorting. I use 21 censuses that span 11 countries in LAC and measure upward mobility as the likelihood of obtaining at least a primary education for individuals whose parents did not finish primary school. I find a convergence rate of 3.5% per year of exposure between the ages 1 to 11, implying that children who move at the age of 1 would pick up 35% of the observed differences in upward mobility between their region of origin and region of destination. In addition, I find significant selection effects of approximately 42%. These results are robust to using a specification that identifies the effect of place within households (i.e., a comparison of siblings with different exposure to places). It is also robust to using a subset of data that consists of only anomalously high migration outflows, instrumenting the choice of destination with historical migration, and a combination of both approaches. Finally, I also document regional childhood exposure effects in upward mobility using individuals age 18-25 when secondary education is the level of interest. I find convergence rates that are higher and imply that children by the age of 18 may pick up approximately 90% of the difference in IGM when they move at age 1.

Paper II: *“The Geography of Intergenerational Mobility in Latin America and the Caribbean”*

In this paper, I estimate intergenerational mobility (IGM) in education using cross-sectional data from 91 censuses that span 24 countries in Latin America and the Caribbean (LAC) over half a century. I measure upward mobility as the likelihood of obtaining at least a primary education for individuals whose parents did not finish primary school, whereas downward mobility as the likelihood of failing to complete primary education for individuals whose parents completed at least primary school. In addition, I explore the geography of educational IGM using nearly 400 “provinces” (coarse administrative units similar to states in the U.S.) and more than 6,000 “districts” (fine administrative units similar to counties in the U.S.). I document wide cross-country and within-country heterogeneity. In LAC, the distance between the most and least upwardly mobile country is close to what has been recently documented in Africa, although the least mobile countries in Africa are less mobile than the least mobile in LAC. I document a declining trend in the mobility gap between urban and rural populations, but I do not find important differences by gender. Within countries, the level of mobility is highly correlated to the share of primary completion of the previous generation, which suggests a high level of inertia. In addition, upward (downward) mobility is negatively (positively) correlated to distance to the capital and the share of employment in agriculture, but positively (negatively) correlated to the share of employment in industry.

Paper III: *“Intergenerational Educational Mobility within Chile”*

I estimate intergenerational mobility (IGM) in education at a disaggregated geographic level for a cohort born in the 1990s using full-count census microdata from Chile. I document wide variation across more than three hundred communes in eight measures of IGM. Relative mobility measured as one minus the correlation coefficient between children's years of schooling and parents' years of schooling ranges between 0.50 and 0.96. Relative mobility is positively correlated to the number of doctors, and negatively correlated to the ratio of students per teacher, and to labor earnings inequality, especially in the upper half of the income distribution. Using a LASSO, I find that the share of students enrolled in public schools, the number of students per teacher, the number of doctors, and municipal budget, among others, are the strongest predictors of IGM. In addition, I also document within country variability in how parental education affects other child's outcomes such as attending tertiary education and being mother as a teenager in the case of females.
